

Homefile Processing

Homefile processing is the method used to gather and download data keyed manually that is in another bureau's area of coverage.

MENU: CF4MNU

1. CF4ZIP - DFU for Home File Zip code range file (OPTIONAL)
2. CF4MSTR - DFU for Unmatched Home File transactions. (OPTIONAL)
3. CF4XREF - DFU for Home File Cross Reference file. (OPTIONAL)
4. CF4DAY - DFU for Daily Home Files to be processed by #20 (OPTIONAL)

9. CF4RECCL- Receive Home Files.

10. CF430 - Assign subject numbers to Home File transactions received.

CF4MNU #9 – Download homefile information gathered from DDI and set up for processing..

CF4MNU #10 – Link the homefile data into your local database.

The linking process is almost identical to zip striping.
